PREFACE

Diabetes is one of the leading fatal diseases globally, putting a huge burden on the global healthcare system. Early diagnosis of diabetes is of utmost importance and could save many lives. However, current techniques to determine whether a person has diabetes or has the risk of developing diabetes are primarily reliant upon clinical biomarkers

We propose a novel deep learning architecture to predict if a person has diabetes or not from a photograph of his/her retina. Using a relatively small-sized dataset, we develop a multi-stage convolutional neural network (CNN)-based mode which can successfully identify the regions on the retina images that contribute to diagnosis of diabetes. So, retinal images can be used in the clinical setup to diagnose diabetes.

Brain Tumor segmentation is one of the most crucial and arduous tasks in the terrain of medical image processing as a human-assisted manual classification can result in inaccurate prediction and diagnosis. Moreover, it is an aggravating task when there is a large amount of data present to be assisted. Brain tumors have high diversity in appearance and there is a similarity between tumor and normal tissues and thus the extraction of tumor regions from images becomes unyielding. In this paper, we proposed a method to preprocess the 2D Magnetic Resonance brain Images (MRI) by Otsu algorithm which was followed by a convolutional neural network. The experimental study was carried on a real-time dataset with diverse tumor sizes, locations, shapes, and different image intensities.

ACKNOWLEDGEMENT

I would like to acknowledge all the individuals who have contributed to the creation of the book "Deep Learning Techniques for Disease Detection." Their support, guidance, and expertise have been instrumental in shaping this project.

I would like to express my deepest gratitude:

To the research team at GNITS, for their collaboration, assistance, and insightful discussions. Their contributions have greatly enriched the content of this book.

The academic community and fellow researchers who have shared their knowledge and advancements in the field of deep learning and disease detection. Their contributions have played a significant role in shaping the ideas presented in this book.

The publishing team at VSRD Academic publishing (A Division of Visual Soft India Private Limited) for their professionalism, guidance, and support throughout the publication process. Their dedication to bringing this book to fruition is greatly appreciated.

My family and friends, for their unwavering support, encouragement, and understanding during the long hours dedicated to this project. Their love and belief in me have been my constant motivation.

Lastly, I would like to express my heartfelt gratitude to all the readers and users of this book. It is my sincere hope that this work will contribute to advancing the field of disease detection and inspire further research in deep learning techniques.

Thank you all for your invaluable contributions and support.

 V. Divya Raj

CONTENTS

CHAPTER 1: DEEP LEARNING MODEL TO DIAGNOSE DIABETES USING RETINAL IMAGES	1
1.1. INTRODUCTION.....	1
1.2. EXISTING SYSTEMS	4
1.3. LITERATURE SURVEY.....	4
1.4. CHALLENGES IN EXISTING SYSTEM.....	15
1.5. TO EVALUATE THE PERFORMANCE OF THE PROPOSED APPROACH	17
1.6. ORGANIZATION OF THE PROJECT.....	18
1.7. PROPOSED SYSTEM	18
1.8. UML DIAGRAMS	21
1.9. ALGORITHMS USED CONVOLUTION NEURAL NETWORK.....	24
1.10. IMPLEMENTATION AND TESTING	26
1.11. DESCRIPTION OF TECHNOLOGY & TOOLS.....	28
1.12. DATASET DESCRIPTION	36
1.13. RESULTS ANALYSIS.....	39
1.14. DENSENET 169 RESULTS.....	40
1.15. RESNET RESULTS.....	41
1.16. CONCLUSION.....	44
1.17. REFERENCES	45
1.18. GLOSSARY	46
CHAPTER 2: BRAIN TUMOR DETECTION USING DEEP LEARNING TECHNIQUES	49
2.1. INTRODUCTION.....	49
2.2. PROPOSED SYSTEM	58

2.3.	IMPLEMENTATION & TESTING.....	74
2.4.	RESULTS ANALYSIS.....	84
2.5.	CONCLUSION & FUTURE SCOPE	92
2.6.	REFERENCES	93
2.7.	GLOSSARY	95
